THE ECOSYSTEM AND DIGITAL ECONOMY IN LATIN AMERICA
THE PURPOSE OF THIS STUDY IS TO UNDERSTAND LATIN AMERICAN DIGITAL ECONOMY TRENDS AND MAKE POLICY RECOMMENDATIONS FOR ITS DEVELOPMENT

- Define the structure and measure Latin America’s digital ecosystem
  - Quantify the development of digital industries in the region
  - Study the ongoing industry transformation, which is shifting from providing connectivity to the delivery of information
  - Analyze the emerging business models

- Define the social and economic context for the formulation of public policies that could foster the development of a digital ecosystem
  - The economic variables that drive the development of a digital economy
  - The creation and transfer of value within the digital value chain
  - The relevance of the demand side (content and applications) for closing the digital divide

- Identify public policies for the development of a digital economy in Latin America
  - How should we stimulate the development of applications and content in the region?
  - What is the role of government as promoter of development of the digital economy?
  - What are the publicy policies that could stimulate the development of a regional digital ecosystem?
- Demand transformation: from connectivity to digitalization

- The digital eco-system: market structure and factors driving dominance

- Creation and transfer of value within the digital value chain

- The digital innovation challenge in Latin America
ADOPTION OF COMMUNICATION TECHNOLOGIES IN LATIN AMERICA CONTINUES TO GROW LEADING TO THE INCREASING IMPORTANCE OF MOBILE ACCESS TO DIGITAL PLATFORMS

INFORMATION AND COMMUNICATION TECHNOLOGIES PENETRATION (2000-14) (% of population)

IN SUM, WHILE THE BEHAVIOR OF THE LATIN AMERICA INTERNET USER RESSEMBLES THAT OF THE INDUSTRIALIZED WORLD, SEVERAL CHALLENGES FOR DIGITIZATION DEVELOPMENT REMAIN

**PROGRESS**

- Significant progress in the adoption of ICT (126% mobile telephony; 52% Internet; 24% mobile broadband; 43% social networks; 41% fixed broadband households; 57% pay-tv households)
- Digital consumption behavior is similar to that of industrialized countries (hours connected; 78% social network adoption among Internet users)

**REMAINING CHALLENGES**

- Advanced digitization countries (Argentina, Chile, Colombia, Costa Rica, Panama and Uruguay) are progressing at a faster pace than the rest of Latin America, emphasizing regional duality
- Internet adoption in urban (42%) vs. rural (9%) settings
- Affordability barriers at the base of the pyramid
- Most popular Internet sites developed outside the region
- 26% of most popular sites developed locally (the lowest percentage among regions)
Demand transformation: from connectivity to digitalization

The digital eco-system: market structure and factors driving dominance

Creation and transfer of value within the digital value chain

The digital innovation challenge in Latin America
THE LATIN AMERICAN DIGITAL ECO-SYSTEM COMBINES DOMINANT GLOBAL SOCIAL NETWORKS AND SEARCH PLATFORMS WITH LOCAL ELECTRONIC COMMERCE AND ONLINE VIDEO PRESENCE

- Nine of the ten most important social networks accessed in Latin America are global
- Global search engines (Google, Bing, Yahoo) control 98% of the Latin American market

- While global online video sites (e.g. YouTube) have a dominant presence in the region, local market presence remains important
- The video streaming market is divided between global (e.g. Netflix) and local players
- Latin American electronic commerce platforms have a dominant share of visits and transaction volumes
GLOBAL SOCIAL NETWORKS AND SEARCH PLATFORMS DOMINATE THE LATIN AMERICAN MARKET

ADDITIONALLY, THE ELECTRONIC COMMERCE MARKET IS DOMINATED BY LATIN AMERICAN - ESPECIALLY BRAZILIAN – FIRMS

MOST IMPORTANT E-COMMERCE SITES (number of unique visitors) (2014)

Sources: Comscore; Telecom Advisory Services analysis
THIS SITUATION RAISES A NUMBER OF QUESTIONS REGARDING FUTURE DEVELOPMENT OF THE LATIN AMERICAN DIGITAL ECONOMY

- What explains the structural global dominance of search and social network platforms?
- What is the probability that local online video and video streaming players will capture a significant market share?
- What is the strategic conclusion for the Latin American digital sector of the regional success of Mercado Libre and the Brazilian e-commerce sites?
- Recognizing that we are dealing with a global industry, how should Latin American governments react to stimulate the development of a local digital eco-system?
THE DOMINANCE OF GLOBAL PLATFORMS IN SEARCH AND SOCIAL NETWORKS IS DRIVEN BY ENORMOUS NETWORK EFFECTS AND SUPPLY-SIDE ECONOMIES OF SCALE

NETWORK EFFECTS IN TWO-SIDED MARKETS

- More searchers
- More advertisers
- Digital Platforms

- Learning effects
- Community/affinity effects
- Better signaling
- Market reach
- Negative effects
- Some engine learning

R&D ECONOMIES OF SCALE

Source: Annual reports; Telecom Advisory Services analysis

NOTE: the size of bubble indicates total R&D budget
BEYOND THE STRUCTURAL FACTORS, THE DOMINANCE OF GLOBAL PLATFORMS IS THE RESULT OF COORDINATION FAILURES IN THE LATIN AMERICAN DIGITAL ECO-SYSTEM

DIGITAL ECO-SYSTEM INEFFECTIVENESS

**Production factors**
- Capital
- Human capital
- Technology infrastructure

**Digital technology firms**
- Demand of production factors
- Supply of digital goods

**Demand for digital goods**
- Consumers
- Enterprises
- Government

**Supply side inefficiencies**
- Limited access to capital
- Lack of interest of local and foreign investors
- High transaction costs (e.g., Regulation, collusion)
- Limited human talent production

**Demand-side inefficiencies**
- Demand gap (broadband, PCs) in residential and SME sectors
- Limited export potential
FIRST, THE TOTAL R&D INVESTMENT IN THE REGION IS NOT COMMENSURATE TO ITS LEVEL OF ECONOMIC DEVELOPMENT

**Correlation Between R&D Investment, GDP and Per Capita GDP**

Nota: the size of bubble depicts the size of GDP; the year of per capita GDP statistics is that of R&D investment.

Sources: World Bank; Telecom Advisory Services analysis
THIS IMBALANCE IS DUE TO THE LACK OF COORDINATION AMONG MULTIPLE FINANCING SOURCES AND LIMITED ALIGNMENT WITH ECONOMIC DEVELOPMENT PLANS

- Multiplicity of financing mechanisms, programs and agencies deployed at the national, provincial and municipal level
- Redundancies of financing sources, resulting in sometimes even competition among programs
- Lack of eligibility criteria to assign funds based on development objectives
- Lack of standardization in application procedures, which raises entrepreneur transaction costs
- Limited entrepreneur visibility of financing sources
OF THE TOTAL AMOUNT OF PUBLIC R&D&I FINANCING IN THE DIGITAL SECTOR, ONLY 13% IS FOCUSED IN PROJECT DEVELOPMENT AND INCUBATION

LATIN AMERICA: PUBLIC R&D FUNDS IN THE DIGITAL ECO-SYSTEM
(in million US$)

FINALLY, THE LOCAL CAPACITY FOR GENERATING HUMAN CAPITAL IS FACING QUANTITATIVE AND QUALITATIVE CHALLENGES

ANNUAL GRADUATION OF ENGINEERS AS A PERCENT OF POPULATION (2013)

- Based on a simple correlation between economic development and engineer production, Latin America should increase the annual number of graduates from 143,000 to 210,000.
- 27% of businesses in Argentina, Brazil, Chile, Colombia, Costa Rica, Mexico, Peru and Venezuela report a difficult environment to hire telecommunications professionals.
- On the other hand, the digital sector does not primarily need engineers but graduates in short courses more focused on platform design.
- Diplomas focused on digital platform design do not exist in many countries of the region.

Note: Engineering graduates in the last recorded statistical year as percentage of the population.
Sources: UNESCO; Telecom Advisory Services analysis
THE LIMITED DEVELOPMENT OF A LATIN AMERICAN DIGITAL SECTOR IS DUE TO A COMBINATION OF STRUCTURAL ECONOMIC FACTORS AND COORDINATION FAILURES

**COMPARATIVE ADVANTAGE OF GLOBAL PLATFORMS**

- Direct and indirect network effects reinforce the dominant position of global platforms in search and social networks
- Economies of scale in R&D allow global platforms to maintain an innovation leadership

**COORDINATION FAILURES**

- Inefficiencies in the distribution of public funds
- Lack of alignment between development plans and digital R&D investment
- Barriers for stimulating venture capital investment
- Limited production of human capital

Future development of digital industries could be also affected by structural imbalances in the value chain
Demand transformation: from connectivity to digitalization

The digital ecosystem: market structure and factors driving dominance

Creation and transfer of value within the digital value chain

The digital innovation challenge in Latin America
THE GROWTH IN LATIN AMERICAN DIGITIZATION HAS CONTRIBUTED TO 4.30% OF ACUMMULATED GDP BETWEEN 2005 AND 2013

ECONOMIC IMPACT OF DIGITIZATION (2005-13)

Note: includes Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Jamaica, Mexico, Nicaragua, Panama, Paraguay, Peru, Dominican Republic, Trinidad & Tobago, Uruguay, and Venezuela

IN SUM, WHILE THE DIRECT ECONOMIC CONTRIBUTION OF DIGITAL OPERATORS IS LIMITED WHEN COMPARED TO OTHER VALUE CHAIN STAGES, INDIRECT EFFECTS ARE SIGNIFICANT

- New business creation (platform applications, videogames, content)
- Productivity increase in certain sectors of the economy
- Price reduction in consumer good purchasing
- Increase in average household income
- Broadband adoption stimulus
FOR EXAMPLE, MULTI-SIDED NETWORK EFFECTS OF DIGITAL AGGREGATION PLATFORMS REPRESENT AN INCENTIVE FOR THE CREATION OF NEW BUSINESSES

FACEBOOK: MULTI-SIDED PLATFORM

IN SUM, WHILE THE DIGITAL ECO-SYSTEM HAS A SIGNIFICANT AGGREGATE ECONOMIC CONTRIBUTION, ITS INTERNAL DYNAMICS ARE AFFECTED BY STRUCTURAL IMBALANCES

**VALUE ADDED CREATION**

- In Latin America, ICT capital explains 0.5 percentage points of GDP growth
- Digitization growth has contributed 4.3% of accumulated GDP between 2005 and 2013
- Regional digitization has contributed to the creation of 900,000 jobs/year

**DIRECT CONTRIBUTION BY STAGE OF THE VALUE CHAIN**

- The providers of connectivity, equipment and terminals generate 91% (US$ 109 billion) of annual gross sales and 98% (631,000) of total jobs

**INDIRECT CONTRIBUTION OF THE VALUE CHAIN**

- Digital firms contribute to new business creation (27,000 jobs and US$ 1,205 million in gross sales)
- Also provide a stimulus for broadband adoption, productivity, etc.

**IMBALANCES IN THE VALUE CHAIN**

- Profitability of global digital platforms is on average 20-40 percentage points higher than other value chain players
- The effective tax rate of telecommunications operators in Latin America is 15 percentage points higher than digital operators
Latin America is progressing very slowly in the construction of a domestic digital industry.

The structural imbalance in the current value chain might contain potential barriers to the development of a local digital industry.

Low profitability rates in the transport stage could negatively influence capital spending in the development of access infrastructure.

Different tax regimes for firms participating in the eco-system could entail distortions that can ultimately affect consumer welfare.
- Demand transformation: from connectivity to digitalization

- The digital ecosystem: market structure and factors driving dominance

- Creation and transfer of value within the digital value chain

- The digital innovation challenge in Latin America
THE DEVELOPMENT OF A LATIN AMERICAN DIGITAL ECOSYSTEM REQUIRES IMPLEMENTING A NEW SET OF PUBLIC POLICIES

- Implement new practices in publicly-sponsored innovation for new business development (focus on few efforts, align with development objectives, rely on civil society inputs)
- Tackle the inefficiencies in private innovation (promote innovation in large enterprises, improve start-up selection and mentorship)
- Address the coordination failures in public spending (focus on scaling up projects, avoid redundancies)
- Generate necessary stimuli to increase private venture capital funding (IP protection, capital markets development, international accounting standards)
- Address structural imbalances in the digital value chain (asymmetric taxation rules)
- Promote investment of development banks (pooled financing procedures)
- Tackle the human capital gap (two-track talent development)
- Develop an integrated industrial policy for development of digital industries
- Address the fragmentation of institutions in charge of managing public policies in the digital domain
Latin America has already started to deploy public and private initiatives aimed at promoting digital innovation.

PRIVATE DIGITAL INNOVATION NEEDS TO INCREASE SPENDING LEVELS AND FOCUS THE NUMBER OF START-UPS

- Promote digital innovation from large Latin American companies
  - Enhanced availability of financial and human resources
  - Possibility of accelerating digitization of production processes to build competitive advantage, and increase added value

- Private sector innovation needs to focus more its efforts in selection and mentorship
  - Increase selectivity of proposals
  - Increase the ratio of mentors per start-up
  - Select mentors among those that have scalability experience
  - Create relationships between entrepreneurs and business managers in order to expand support beyond start-up mentorship
  - Use large enterprises as environments for scalability
LATIN AMERICA HAS TO FOCUS ITS DIGITAL INNOVATION EFFORTS IN THOSE AREAS WITH HIGH IMPACT THAT LEVERAGE COMPARATIVE ADVANTAGE

- High social impact areas (health and education)
- Domains of high economic impact (agriculture, manufacturing, mining and natural resources, energy)
- Governments should provide direction for public investment, which could also be followed by the private sector
- Promote regional coordination to address funding redundancies, duplication of efforts and frictional costs, leveraging complementary areas of comparative advantage
  - Assign centers of excellence by country based on existing experience
  - Share funding on a regional basis
  - Migrate toward a digital single market
- Promote the common linguistic environment to gain scale
AT THE SAME TIME, IT IS CRITICAL TO EVOLVE BEYOND THE “TROPICALIZATION” OF FOREIGN DIGITAL BUSINESS MODELS

LOCAL DIGITAL PLATFORMS AND PRECEDING MODELS

<table>

DIGITAL INNOVATION SHOULD FOCUS ON A FEW CRITICAL BUSINESSES WITH HIGH POTENTIAL: EXAMPLES...

<table>
<thead>
<tr>
<th>SOCIAL MESSAGING</th>
<th>VIDEO STREAMING</th>
<th>ELECTRONIC COMMERCE</th>
</tr>
</thead>
</table>
| - Service adapted to geographies with limited broadband bandwidth  
  - High volume of short messages indicate the potential for a substitute product that includes social networking features  
  - Despite WhatsApp Messenger dominance (38 million users), entry barriers are extremely low given low multi-hosting costs  
  - Required capital investment is relatively low (WhatsApp: US$ 111 millions)  | - Importance of Spanish and Portuguese content in the structuring of catalogs  
  - Low barriers to entry given the low multi-hosting costs  
  - Fixed broadband has reached a Latin American prorated average of 38.49% of households (4Q2014)  
  - Average bandwidth has reached 3.53Mbps (4Q2014)  
  - Despite low bankarization rates, providers could offer service through other payment systems  | - Accelerated market growth, especially in Mexico, Brazil and Argentina  
  - The success of Mercado Libre and brazilian sites indicates that knowledge of local market dynamics and indirect network effects are important comparative advantages  
  - Venture capital is inclined to fund these ventures  
  - Development of these platforms could gain even further speed if five barriers are addressed (protection of consumer interests, legal validity of electronic invoice, privacy, logistics infrastructure, and bankarization) |

<table>
<thead>
<tr>
<th>DIGITIZATION OF PRODUCTION PROCESSES</th>
<th>COMPLEMENTS TO GLOBAL PLATFORMS</th>
</tr>
</thead>
</table>
| - Leverage public and private initiatives  
  - Driven by public incubators  
  - Focused on health, transportation, natural resources, robotics, and biotechnology | - Apps for Facebook Platform, Twitter and LinkedIn  
  - Increasing funding availability  
  - Public funding offering partial risk guarantees or non refundable resources |
Focus on a limited number of start-ups in order to reach critical mass financing

Focus financing of not early development stages, but also on start-up scaling

Align start-up selection criteria with most important needs of local economy

Refine eligibility criteria for financing, balancing the attracting of local talent

Combine innovation support with improvement of legal and regulatory frameworks in support of entrepreneurship

Create institutional and political consensus to ensure continuity of the innovation effort beyond political-electoral cycles

Achieve a geographic and human talent balance

Incorporate representatives of the private sector in program oversight

Formalize alliances with local academic institutions

Develop entrepreneurship social networks
SUB-NATIONAL PUBLIC INCUBATORS ARE ALSO A SOURCE OF BEST PRACTICES THAT COULD BE APPLIED AT THE NATIONAL LEVEL

- Develop level frameworks for management of intellectual property
- Build technology transfer mechanisms
- Attract private venture capital for start-up financing

- Strengthen University-Private sector-Public sector collaboration mechanisms
- Promote innovation in tertiary education
- Create system to monitor trends and market opportunities
- Promote innovation in tertiary education
- Incorporate local population in the idea flow about new start-ups

- Increase the allocation of local funding to local science and technology initiatives
- Engage local organizations in the investment of innovation
- Combine regulation and national investment funds
- Leverage purchasing power of innovative public organizations
IT IS IMPERATIVE TO CREATE FRAMEWORKS THAT ALIGN INNOVATION FUNDING WITH DEVELOPMENT OBJECTIVES, THEREBY REDUCING COORDINATION FAILURES

ALIGNMENT BETWEEN DEVELOPMENT STRATEGIES AND FUNDING OF INNOVATION

- Development Strategies and Digital Public Policies
  - Uniform eligibility criteria
  - Standardization of application processes
  - Efficiency and funding alignment principles according to national development strategies

National Public Sector Programs

Subnational Public Sector Programs

Private Sector Programs

Individual researchers

Research institutes

Start-ups
ADDITIONALLY, THE CONDITIONS AND FRAMEWORKS DRIVING VENTURE CAPITAL FLOWS NEED TO BE IMPROVED

- Eliminate restrictions to local institutional investment (for example, lack of legal framework of preferred shares, which obliges investor to assume majority capital ownership to ensure control)
- Develop capital markets to facilitate exit strategies
- Improve the taxation framework of funds and investments
- Facilitate bankruptcy proceedings and ensure minority investor rights
- Simplify requirements for registration funds
- Develop internationally recognized accounting standards to ensure better visibility and monitoring of investments
- Introduce laws that facilitate the launch and operation of investment funds
- Provide certainty in the protection of intellectual property rights
SOME FINANCING FAILURES CAN BE ADDRESSED THROUGH MECHANISMS THAT ALLOW A BETTER COORDINATION BETWEEN PUBLIC AND PRIVATE SECTOR CAPITAL

STRUCTURE OF TWO-SIDED FUNDING PLATFORM

Financing Sources
- Public funds
- Angel investors
- Venture Capital
- Banks
- Pension funds
- Foreign investors

Funding platform sponsored by public sector
- Seed capital
- Angel investors
- Series “A” funds

Digital eco-system firms
- Start-ups
- Scaled digital enterprises

• Public funds
• Angel investors
• Venture Capital
• Banks
• Pension funds
• Foreign investors
DEVELOPMENT BANKS COULD ALSO FULFILL AN IMPORTANT ROLE IN ADDRESSING COORDINATION FAILURES IN THE FUNDING OF DIGITAL START-UPS

Support of large enterprise innovation

- Proactive support of large enterprises for projects focused on research, engineering, development, technology assimilation, production, and product distribution, processes and services in the value chain

Non-financial innovation support

- Technical feasibility studies
- Advisory regarding project evaluation
- Incubator promotion agents, following the InfDev model
- Development of networks focused on the exchange of financing experiences

Deployment of innovative funding mechanisms

- Pooled financing mechanisms
- Coordination of public, institutional, and private investors
- Risk reduction through partial risk guarantees

Combination of development banks’ resources

- Participation in institutional financing platforms to provide stability and certainty in digital innovation, provide liquidity in correction periods, and create investor confidence, without crowding out private capital
THE STARTING POINT FOR THE DEFINITION OF PUBLIC POLICIES IN THE DIGITAL DOMAIN IS THE DEVELOPMENT OF A STRATEGIC VISION ADDRESSING SOME KEY ISSUES

- What is the key objective in terms of digital industrial policy?
  - Digitization of production processes?
  - Social digitization addressing inclusion and inequality?
  - Development of an export orientes sector?
  - What are the strategic options regarding the relationship with global platforms?

- This strategic vision should contribute to the creation of a holistic framework integrating initiatives that until now are fragmented
  - Data protection and cyber-security laws
  - Smart cities
  - Start-up promotion
  - Telecommunications infrastructure
It is rare to find a development plan in Latin America that considers digital industries as part of the production matrix.

Governments in the region rarely recognize the importance of digital industries and its inductive effect in economic development.

The digital agendas in the region combine partial goals without linkage to macro objectives, such as a change in the production matrix, increase of value added by digitization of production processes, or poverty reduction.

Digital agendas should answer some key questions:

- Which sectors should digital technology be a priority to maximize value added?
- Which is the way digital innovation should be linked to those sectors?
- How should private, national and foreign funding we attracted to those sectors?
- How should be invested?
- What are the respective responsibilities of the public and private sectors?

The role of government should go beyond planning, and assume promotion responsibility and project execution.
THE EXPERIENCE OF COUNTRIES THAT HAVE BEEN SUCCESSFUL IN EXECUTING DIGITAL STRATEGIES ALSO YIELDS SOME INSTITUTIONAL RECOMMENDATIONS

- Centralize digital public policies within a cabinet-level ministry with responsibility for infrastructure, ICT, applications and services industrial development
- Build stable technical teams
- Establish consultative mechanisms that include the private sector (telecommunications operators, manufacturers, ICT providers), public enterprises (municipal and national operators, cooperatives) and civil society (academia, unions, consumers and regional groups) in policy decision making
- Leadership from highest level of executive branch in the execution of digital policies
- Cross-ministerial coordination (Education, Industrial development, Finance, Culture, Health, Security)
- Involvement of regional and local governments
TO CONCLUDE, THE STUDY HAS PROVIDED GUIDELINES AND A ROADMAP FOR LATIN AMERICA TO TACKLE THEongoing fundamental changes in the digital eco-system

- The digital eco-system has been undergoing a fundamental transformation
- Until now, the primary public policy focus has been in networks and infrastructure
- The future policies had to be underpinned by an integrated vision of the co-system
- The risk of not implementing these changes is that Latin America will continue to be a mere consumer of content, applications and services developed beyond its frontiers, with a limited capacity of adding value to production processes
